No messy assembly required

Changes in seconds just shake and rinse

For best results, change every 2-4 weeks  
Aqua-Tech EZ-Change Aquarium Filter Replacement Cartridge

Filters are a very important piece of equipment in an aquarium and critical to your aquarium's success. The job of the filter is to move the water through the filter cartridge where it is processed to remove odors and small particles of waste and through the BIO-Fiber to eliminate the toxic ammonia and nitrites from the aquarium water. Each of the AQUA-Tech Power Filters provides this 3-stage filtration for healthier fish and cleaner water.

The first stage of the AQUA-Tech filtration is mechanical. The blue polyfiber pad screens out dirt and debris as water passes through.

The second stage of the AQUA-Tech filtration is chemical. The activated carbon that is in the EZ-Change™ Filter Cartridge removes dissolved waste and cleans the water of odors.

The third stage of the AQUA-Tech filtration is biological. The BIO-Fiber provides additional surface area for beneficial bacteria to grow and thrive. Review 2021, feedback 2021, promo code, discount code 2021, buy, picture, description, sale, price comparison, cheap, cheapest, value for money.
