Lens width: 4.8 inches

SOFT SILICON AND UNBREAKABLE MATERIALS- RIVBOS always walks at the forefront of the world of stylish high-tech frames and lenses. With our revolutionary soft silicon and unbreakable materials, our sunglasses frames perfectly resolve the breaking issues. Along with our attention to detail, we take great pride in knowing that our product is safe for your children to wear.

SUPER CUTE AND COLORFUL DESIGN- Our sunglasses provide various color assortment for parents to choose. Both boys and girls can find their suitable sunglasses in RIVBOS store. RIVBOS sunglasses adhere the design concept of "experiencing splendid life". We propose the attitude that design comes from life and it is above the real life. We would like to follow fashion with those who advocate high taste and dare to try.

Unpolarized light, after reflection at a specular (shiny) surface, generally obtains a degree of polarization. Polarizing sunglasses exploit this effect to reduce glare from reflections by horizontal surfaces, notably the road ahead viewed at a grazing angle. Wearers of polarized sunglasses will occasionally observe inadvertent polarization effects such as color-dependent birefringent effects. Young eyes are more susceptible to sun damage because they have larger pupils and clearer lenses. Kids receive 3x more annual UV exposure than adults, but less than 30% of parents are currently protecting their children's eyes with sunglasses. When choosing the size of RIVBOS sunglasses, you have to consider the various width measurements given in the sunglasses' specification details. This can be accomplished by approximating the width of the sunglasses with a ruler relative to your facial features. However, the best way to choose the right size of RIVBOS sunglasses is to visit a licensed retailer and try on multiple sizes in person. This will give you an idea of what frame width will best fit you. Look into a mirror and hold a ruler below your eyes. Calculate the distance between both ends of your temples. To calculate the frame width of a sunglasses from the standard measurements use this simple formula: $2 \times \text{Lens Width} + \text{Bridge Width} \pm 1 \text{ inch}$ (average for the hinge extensions) RIVBOS apply super flexible and bendable material - silicon rubber to our kids' sunglasses. They will not easily broke in normal use but please use them gently. Don't put too much pressure on them. We hope your children could have a colorful childhood so we provide various of colors for you to choose. We also have many different styles and designs. We are sure you will find something your like in our store. We provide several accessories to cover your needs-a pouch which could also be used for cleaning cloth, a polarization test card and a strap. The strap could keep the sunglasses from falling down while running or doing other sports so your kids won't get hurt.
